REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

As per page 17 of the Applicant's Appeal Brief, the Applicant contends, "Appellants' teach that the minimum distance of the (48,10) encoder varies depending on the positions of the 16 punctured symbols. Combinations of the 16 punctured positions, providing superior performance, are shown below. When using the following combinations of the punctured positions, the (48,10) encoder has the minimum distance of 18 and provides superior weight distribution".

MPEP 2141 (III) states "Objective evidence or secondary considerations such as unexpected results, commercial success, long-felt need, failure of others, copying by others, licensing, and skepticism of experts are relevant to the issue of obviousness and must be considered in every case in which they are present. When evidence of any of these secondary considerations is submitted, the examiner must evaluate the evidence. The weight to be accorded to the evidence depends on the individual factual circumstances of each case. *Stratoflex, Inc. v. Aeroquip Corp.*, 713 F.2d 1530, 218 USPQ 871 (Fed. Cir. 1983); *Hybritech, Inc. v. Monoclonal Antibodies, Inc.*, 802 F.2d 1367, 231 USPQ 81 (Fed. Cir. 1986), cert. denied, 480 U.S. 947 (1987).

The Examiner asserts that it is well known in the art puncturing a code will not generally provide optimal minimum distance for a punctured code. It is also known that there is no general formula for producing a puncturing pattern to optimize minimal distance for a given code. Given a particular code the optimal puncturing pattern can be found for the particular code, but the puncturing pattern can only be guaranteed to

be optimal for the particular code and will probably not be optimal for any other code. For example, given a particular (64, 10) code, an optimal puncturing pattern of 16 bits to generate a punctured (48, 10) code can be found for the particular (64, 10) code, but the puncturing pattern will most likely not be optimal for any other (64, 10) code and the generated punctured (48, 10) code from any other (64, 10) code is most likely not optimal. Implicit in the argument on page 17 of the Applicant's Appeal Brief; is that the optimal puncturing patterns in claims 8, 19, 25 and 29-44 correspond to specific (64, 10) codes for optimizing the minimum distance of the specific (64, 10) codes.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
